

flexBox - Your Universal Transceiver Wizard

Configure **compatible** GBIC, SFP, XFP and SFP+ on your own.

Online & simple for nearly all router/switch/multiplexer hardware.

Cost reduction	Use cost efficient standard transceivers instead of expensive proprietary solutions
Reduce CapEx	„ One transceiver fits all systems “ by unlimited reconfiguration of the system compatibility
Green-IT	Re-use second hand transceivers and avoid electronic waste
Optimize Stock	Minimize service and spare part stock by efficient utilization and repeated configuration of transceiver hardware
Simple & Mobile	Use the intuitive webservice to configure your transceivers online wherever you are
Unlimited Networks	Unrestricted support for long-reach and C/DWDM optics for almost every networking hardware
Successful onsite support	No more problems during installations due to missing or unsuitable transceivers

Many system vendors for router and switch hardware **block the use of cost effective pluggables** like GBIC, SFP, XFP or SFP+ and force the deployment of expensive proprietary OEM transceivers.

The **flexBox** enables the simple **Do-It-Yourself** configuration of **compatible standard transceiver** for almost any system vendor's hardware over the web. Thus transceiver resources can be used in the most flexible way and network planning can be accomplished with premium standard hardware.

The flexBox is connected by a standard USB port of a mobile laptop or PC and by this to the internet. The intuitive user interface is created for the simple use in stock/logistics as well as for technical onsite-support at customer site.
